## An Effective Diagnostic Tool for Screening Emotional, Social, and Behavioral Problems in Children and Adolescents.

Behavioral screening for childhood mental health disorders is a major concern in the primary care setting. On a daily basis, healthcare professionals screen children and adolescents for these conditions.

ScreenITdx™ Childhood Mental Health Disorders screening tool was designed for pediatricians, general practitioners and allied mental health professionals to help with:

- Identification of the condition
- Complete definitions of pediatric disorders
- Intervention solutions
- Referral considerations
- Physician, patient/parent and educator treatment plans

Unlike any tool previously designed for computer use or hand scoring, ScreenITdx™ continuously defines and refines the diagnosis after each question.

Through a patent pending process, ScreenITdx™ can accurately assess and diagnose a patient's potential for:

- Childhood emotional disorders
- Behavioral disorders
- Learning, communication and developmental problems
- Normal child development

Childhood Mental Health Disorders diagnostic software provides:

- Thirteen comprehensive clinical diagnostic categories
- Chart documentation
- Physician and patient treatment plans
- Complete definitions of thirteen mental health disorders
- Over 40 printable resource documents

Single user license for Palm OS . . . . . \$395.00

Single user license for Windows. . . . . \$595.00

---

**Other screening tools** available from Windy Sails Software, Inc. include:

Pain Disorders

- An effective diagnostic screening tool for bio-medical and behavioral treatment
