

### An Effective Screening Tool for Pain Management

Screening for specific pain disorders in adults is a major concern in the primary care setting. On a daily basis, general physicians screen their chronically ill patients for treatments.

ScreenITdx™ Pain Disorders screening tool was designed for general physicians and specialists to help with:

- Identification of the condition
- Complete definitions of pain disorders
- Intervention solutions
- Referral considerations
- Physician and patient treatment plans

Unlike any tool previously designed for computer use or hand scoring, ScreenITdx™ continuously defines and refines the diagnosis after each question.

Through a patent pending process, ScreenITdx™ can accurately assess and diagnose a patient's potential for:

- Mental health disorder related to pain
- Potential substance abuse issue
- Organic pain disorder
- Non-organic pain disorder

Accurate diagnosis is the first step to a positive outcome for any treatment.

Pain Disorders diagnostic software provides:

- An effective diagnostic screening tool for bio-medical and behavioral treatment
- Chart documentation
- Referral considerations to appropriate pain management specialists and/or clinics
- Over 40 printable resource documents

Single user license for Palm OS . . . . . \$395.00

Single user license for Windows. . . . . \$595.00
